

"Mother
I LIKE
TO PLAY IN
OUR YARD
better than
Mary's"

A Sure C

"Garbatoxis" is the foul odor that comes from filthy fly-infested, disease breeding garbage cans.

Safe and sanitary disposal of garbage presents an ever present menace to health and deserves the serious consideration of individual families and entire communities. The Majestic Underground Garbage Receiver solves the problem with *ease* and *economy*.

Handy-Sanitary-Fly Tight

The Majestic Underground Garbage Receiver is *buried in the ground to the top* in the most convenient spot - just outside the back door. A slight press of the foot opens the lid and garbage is dropped into an inside can that is easily removed when filled. With only the odor-tight, fly-tight cover above ground, the garbage can is out of sight and inaccessible to dogs and disease bearing insects.

Out of Sight

UNDERGROUND

Garbage Receiver

rbatosis !!

Truly the home has turned around - "backyards" today have become outdoor living rooms - surrounded by beautiful flowers and shrubbery. Even the thought of an exposed garbage can in such a picture, jars upon the finer sensibilities. Majestic Underground Garbage Receivers remove this last incongruous detail from the "otherwise lovely yard".

Thrifty Health Protection

With a Majestic Underground Garbage Receiver you can be thrifty in your health protection and have the added convenience and appearance they afford. Malleable iron tops and heavy "copper - bearing" steel shells are *guaranteed for ten years* against breaking or rusting out. We have records of installations that show *no signs of deterioration after 16 years of use*. The inner cans are so thoroughly protected that they seldom have to be replaced within a period of three or four years.

Easily Emptied

*Can you blame anyone
for disliking this
environment*

The Majestic Underground Garbage Receiver comes complete with galvanized garbage can. The top as shown in the illustration consists of a ring, lid and foot lever. A light pressure on the lever lifts the lid.

Construction:

Breakproof malleable iron top and hinges. Non-rusting hinge pins prevent corrosion and binding of the lid. Copper bearing steel body, sixteen gauge, thoroughly painted inside and out. Galvanized inside can of twenty-six gauge thickness has doubled locked seams. Each receiver packed in heavy corrugated carton which insures delivery in first class condition. Top and body are guaranteed not to break or rust out within ten years.

THE MAJESTIC COMPANY, Huntington, Ind.
